Table 1 Assessment of UNCT Progress of integrating the MTPR 2021 Recommendations

MTPR Recommendation	Final Assessment of Progress Since 2021	Evaluator's Recommendation
Review of UNDAP II M&E Results Framework	Limited progress observed in developing SMART indicators and addressing design gaps. Further refinement needed, with clear monitoring guidance on developing smart indictors, integration and mainstreaming cross cutting areas including gender, climate change, disabilities, geographical and vulnerability targeting and alignment with national priorities for integrating emerging issues.	Facilitate a comprehensive review of the current UNDAP II results framework with stakeholder involvement to develop SMART indicators aligned with national priorities.
COVID-19 Recovery Integration	Acknowledgment of UN efforts in integrating core Programming principles, yet challenges persist in effectively addressing gender equality, environmental sustainability, and LNOB. Concrete action plans required to leverage UN comparative advantages.	Develop and implement concrete action plans to address challenges in integrating core Programming principles into COVID-19 recovery plans, ensuring effectiveness in addressing gender equality, environmental sustainability, and LNOB.
Resource Mobilization and Partnerships Progress	Minimal advancement in implementing the joint resource mobilization strategy and engaging with the private sector. Clarity lacking in the roadmap and diversification of donor engagement strategies.	Develop a clear roadmap with diversified donor engagement strategies to effectively implement the joint resource mobilization strategy and engage with the private sector in support of the UNDAP II objectives.
Alignment with National Priorities	Recognition of alignment efforts with national priorities, especially in critical SDGs. However, depth of alignment needs improvement, necessitating a robust self-reflection process for effective SDG implementation.	Strengthen the self-reflection process to ensure a deeper alignment with national priorities, particularly in critical SDGs, through continuous stakeholder engagement and review mechanisms.
Strategic Positioning Adjustments	While strategic decisions are acknowledged, clarity is required on scaling mechanisms for programmatic effectiveness and impact. Stakeholder consultation and thorough analysis recommended for informed decision-making.	Conduct thorough stakeholder consultation and analysis to develop clear scaling mechanisms for strategic positioning adjustments, ensuring programmatic effectiveness and impact across all interventions.
Management and Coordination Efficiencies	Appreciation for improved coordination, but clarity is needed in roles and responsibilities. Enhanced support and perception of value for facilitation teams essential, alongside bolstered support for results groups and communities of practice.	Provide clear guidance on roles and responsibilities and enhance support for facilitation teams to ensure their effectiveness. Strengthen support for results groups and communities of practice to maximize collaboration and learning.
(JP)ming Improvement	Progress noted in streamlining management systems, but clarity lacking in criteria for (JP) selection and scaling up. Strengthening transparency and accountability paramount for effective (JP) programing.	Enhance transparency and accountability in (JP) programming by developing clear criteria for program selection and scaling up, ensuring alignment with UNDAP II objectives and stakeholder expectations.
UNCT Delivering as One Accountability	Improved joint communication and resource flow tracking recognized, yet visibility of agency results as One UN results remains insufficient. Urgent need for enhanced transparency and accountability mechanisms, including a comprehensive dashboard.	Develop a comprehensive dashboard to enhance visibility of agency results as One UN results. Strengthen transparency and accountability mechanisms to ensure effective delivery as One UN.
Core Programming Principles Integration	Acknowledgment of progress in mainstreaming core Programming principles, but targeted strategies and technical support needed, particularly in human rights and climate change adaptation areas.	Provide targeted technical support and develop strategies to mainstream core Programming principles, focusing on areas such as human rights and climate change adaptation, to ensure effective integration into UNDAP II interventions.
Private Sector Strategic Engagement	Call for a clear partnership strategy for private sector engagement, including explicit (JP) development. Clearer guidance and effective leveraging of corporate social responsibility crucial for sustainable development outcomes.	Develop a clear partnership strategy, including (JP) development, to enhance private sector engagement. Provide clearer guidance and leverage corporate social responsibility for sustainable development outcomes.
